

Course Overview

IAHD Professional Program #PRO.009

The IAHD Pro-Training is a totally integrated program which consists of two to three days of classroom, pool and optional open water training. You will learn how to relate to the psychological aspects of someone who has become physically disabled, or was born physically or mentally challenged. During the program we'll use a variety of educational systems to better understand about a variety of physical disabilities and how they relate to scuba diving. Through simulations and workshops in the Pool and Open Water you learn how to overcome some of the problems you may encounter when training physically disabled divers, including methods to assist those with sight impairment, hearing impairment, spinal injuries, amputations, etc. We'll demonstrate how to adapt and modify normal diving equipment to the needs of the disabled diver, and review products that are available to help with your programs. Overall, candidates will learn to become more aware of the students, their needs, attitudes, and limitations, while at the same time learning how to develop foresight in logistic, site selection, and special considerations.
